SUMMARY

Data Science and Economics student at UC Davis (2027) working across machine learning, data engineering, and quantitative analysis. Currently engineering an enterprise AI gateway on Amazon Bedrock, after building pipelines processing 100K+ records, predictive models at 0.956 AUC, and a pairs-trading engine that lifted out-of-sample Sharpe from 0.69 to 2.01.

EDUCATION

Double Major - BS, Data Science; BA, Economics; Technology Management Minor | University of California, Davis June 2027
COURSEWORK: Database Systems, Algorithms, Time Series Analysis, Data Engineering, Intermediate Microeconomics/Econometrics

EXPERIENCE

Folio3 Software **Remote (Belmont, CA)**
AI Engineering Intern June 2026 - Present

- Engineer an enterprise AI gateway to route Slack and MS Teams messages to guardrailed, retrieval-augmented Amazon Bedrock agents, implementing input, output, and tool-loop controls, token quotas, and serialized session state for resumable workflows.
- Build SCIM identity synchronization and role-based access control from Microsoft Entra ID and Okta into a relational database, while containerizing Python services for deployment to Amazon ECS and AWS Fargate using AWS CDK and CI/CD pipelines.

ExpoLab, UC Davis **Davis, CA**
Undergraduate Research Assistant April 2026 - Present

- Develop full-stack applications on ResilientDB, contributing to blockchain-based distributed systems designed for high performance, scalability, and resilience.
- Collaborate with researchers and developers to build, test, and refine decentralized application components aligned with real-world system reliability and software engineering requirements.

Hala (Restaurant Discovery App) **Davis, CA**
Founder & Developer December 2025 - Present

- Lead multiple engineering, product, and design teams in building a social restaurant discovery app for Dubai, Riyadh, Jeddah, and Doha, advancing the platform from concept to active testing.
- Develop the React Native and TypeScript mobile experience with a Supabase backend, Google Places API integration, data pipelines, and a normalized rating model designed to improve recommendation reliability.

ZestOps **Lyon, France**
Data Analyst Intern June 2025 - September 2025

- Built Bronze-to-Gold data pipelines processing 100K+ records from APIs, web scraping, and internal sources using Python, SQL, AWS S3, and Snowflake.
- Automated receipt ingestion with a multimodal vision model, JSON validation, record linkage, and cloud routing, reducing manual processing across downstream data workflows.

TECHNICAL PROJECTS

Statistical Arbitrage Engine 2026

- S&P 500 sector ETF pairs-trading engine (cointegration, Kalman-filtered spreads, HMM regime detection, 10-year walk-forward backtest) that lifted out-of-sample Sharpe from 0.69 to 2.01, win rate from 48% to 58%, and cut max drawdown 64%, shipped as a Streamlit dashboard.

NBA Injury Prediction, Machine Learning 2025

- Injury-risk classifiers trained on 11,000+ player-season records and 26 engineered workload and movement features (SMOTE, cross-validated Logistic Regression / Random Forest / XGBoost), reaching 0.956 AUC and 88% accuracy.

Steam Game Analytics Pipeline 2025

- Multi-stage ETL pipeline ingesting 1,000+ games from the Steam Web API, SteamSpy API, and web scraping into a normalized SQLite database, with Python/SQL analysis isolating the drivers of review performance.

CERTIFICATIONS

SnowPro Core (Snowflake) | NVIDIA-Certified Professional: Agentic AI (NCP-AAI) | AWS Certified Cloud Practitioner

SKILLS

Programming & ML: Python, SQL, R, pandas, NumPy, scikit-learn, XGBoost, SMOTE, SHAP, GARCH, HMM, Kalman filter, feature engineering, model evaluation

Data & Cloud: ETL pipelines, record linkage, API integration, web scraping, Bronze/Silver/Gold architecture, AWS (S3), Snowflake, SQLite, Supabase

Viz, Mobile & Web3: Matplotlib, Seaborn, Streamlit, Git, REST APIs, React Native / Expo, Flutter, TypeScript, Solidity, Web3.js

Languages: English (Native), Arabic (Native - Modern Standard & Gulf Dialects), Malayalam (Fluent), Urdu (Professional)
